

NSA Approves the Flint Loc Pump Alarm System for Endorsement

On June 21st 2011, the National Sheriffs' Association board approved the endorsement of the Flint Loc Pump Alarm System. The board met during their annual conference this year in St. Louis, Missouri. The National Sheriffs' Association requires a third party company (Secure Systems Group Ltd) to complete all the due-diligence on companies being considered for endorsement before the board makes any final approvals.

Flint Loc is known around the country as the original and premier alarm system for the petroleum industry. When there is intrusion into a dispenser, the Flint Loc alarm system will immediately shut down the power to that dispenser. The thief has no way of stealing any fuel or placing a skimmer inside the dispenser without the knowledge of the owner.

As Flint Loc's National Sales Manager, David Jacobs, notes, "The Flint Loc alarm system, through our soft, patent pending method, immediately shuts the power down, so the thief cannot steal anything from that dispenser. It has been reported through our customers that not only is there no more fuel being stolen on their sites, but the thieves are fleeing once the alarm is set off. We have been able to protect the fuel and the safety of employees and customers. The endorsement by the National Sheriff's Association helps in adding to the efficiency of the Flint Loc Pump alarm and stopping the theft of fuel".

Flint Loc is the leader in dispenser security with over 5,000 installs nationwide. Flint Loc was founded in 2006 and is patent pending and UL approved. Flint Loc has just added a second layer of security by monitoring all activity and reporting to corporate any breaches in security at the dispenser. References are available upon requests from Flint Loc.
